

## Practical 9

**Question:** Create a student information Form to accept information like Name, Address, City, State Gender, Mobile Number, and email id.

Perform validations for

a. Correct names

b. Mobile numbers c.

Email id

d. If no entered value

e. Re-display for wrongly entered values with message

f. Congratulation and welcome page upon successful entries

### Code:

```
<!DOCTYPE html>
<html>
<head>
<title>Page Title</title>
</head>
<body>

<h2>STUDENT REGISTRATION FORM</h2>

    <form name="form1" method="post" onsubmit="check();">
        <label for="name">Name :</label>
        <input type="text" id="name" name="n1"><br>
    <br>
        <label for="address">Address :</label>
        <input type="text" id="address" name="a1"><br>
    <br>
        <label for="city">City :</label>
        <input type="text" id="city" name="c1"><br>
    <br>
        <label for="state">State :</label>
        <input type="text" id="state" name="s1"><br>
    <br>
        <label for="state">Gender :</label>
        <input type="radio" name="gender" id="male"> Male
    <input type="radio" name="gender" id="female"> Female
    <br><br>
        <label for="Mobno">Mobile No :</label>
        <input type="text" id="Mobno" name="m1"><br>
    <br>
        <label for="email">Email ID :</label>
        <input type="text" id="email" name="e1"><br>
    <br>
```

```
